Multimodal Foundation Models | Generative World Models | Embodied AI

Research Profile & Core Strengths

My research centers on **multimodal foundation models**, **generative world models**, and **embodied AI**, with an emphasis on reliable representations for dynamic environments, video understanding/generation, and model evaluation.

My work converts open-ended capability questions into reproducible benchmarks, diagnostic evidence chains, and efficient model designs, including WRBench dynamic world-state evaluation, VeloxSeg, DINOv3 medical transfer analysis, and H2ASeg PET/CT tumor segmentation.

Experienced with PyTorch / DDP / CUDA / Linux training and evaluation pipelines, data construction, custom model implementation, ablation analysis, visualization, and English academic manuscript writing.

Education

University of Science and Technology of China

M.S. in Information and Communication Engineering, expected Jun. 2028

Sep. 2025 – Present

Advisor: Zhiwei Xiong

Harbin Institute of Technology, Shenzhen

B.S. in Data Science and Big Data Technology; GPA: 3.728/4, Rank: 17/172, Top 10%

Sep. 2021 – Jun. 2025

Mathematics / Statistics / Numerical Computing

Representative Works

Generative World Models

Current World Models Lack a Persistent State Core, *First Author*

arXiv 2026

- **Task:** Evaluate whether generative video models maintain off-screen dynamic world states under viewpoint changes, beyond locally plausible videos.
- **Method:** Built **WRBench** by treating camera motion as an **observability intervention** and defining a six-dimensional diagnostic profile for re-observation consistency.
- **Result:** Evaluated **23 models** across **four control paradigms** and **9,600 videos**, calibrated with **2,547 human verdicts**, identifying endpoint-binding failures in current models.

Medical Vision Foundation Models

VeloxSeg: JL-Guided Efficient 3D Medical Segmentation, *First Author*

ICLR 2026

- **Task:** Improve the efficiency-robustness tradeoff in high-dimensional multimodal 3D perception, including PET/CT and MRI segmentation.
- **Method:** Designed a dual-stream CNN-Transformer framework with **Paired Window Attention**, **JL-guided convolution**, and **SDKT**.
- **Result:** Achieved a **26% Dice gain** with **1.66M parameters** and improved GPU / CPU throughput by **11x / 48x**.

Does DINOv3 Set a New Medical Vision Standard?, *Co-first Author*

arXiv 2025

- **Task:** Evaluate whether DINOv3 can serve as a general medical vision foundation model across heterogeneous 2D/3D medical tasks.
- **Method:** Co-built a transfer benchmark covering **classification, segmentation, and registration** across X-ray, CT, endoscopy, WSI, EM, PET, and ultrasound.
- **Result:** Found partial transfer of 2D self-supervised features to 3D tasks, alongside domain shift and non-monotonic scaling behavior.

H2ASeg: Hierarchical PET/CT Tumor Segmentation, *First Author*

MICCAI 2024

- **Task:** Improve PET/CT tumor segmentation where PET provides functional cues and CT provides anatomical structure, but modality fusion is unstable.
- **Method:** Designed hierarchical cross-modal interaction with **MCSA/BDSA** and **Target-Aware Modality Weighting**.
- **Result:** Achieved a **20.25% absolute Dice improvement** on AutoPET-II, with module ablations yielding **12.20% / 10.94% Dice gains**.

Core Methods & Engineering

Research: World-model evaluation, VLM/VLA representation diagnostics, medical vision foundation-model transfer, PET/CT and MRI 3D segmentation

Engineering: Python, PyTorch, CUDA, DDP, Shell/Bash, L^AT_EX; training/evaluation pipelines, experiment reproduction, ablation studies, custom model implementation

Tools: Linux, Git, Docker, Weights & Biases / TensorBoard, vision, multimodal, and medical-imaging data-processing toolchains

Writing: English manuscript writing for ICLR / MICCAI / Medical Image Analysis submissions, experiment analysis, and reproducibility documentation

Full Research Outputs

Generative World Models

2026 – Present

[1] **Current World Models Lack a Persistent State Core**, *First Author*

[arXiv 2026](#)

Contribution Introduced WRBench for dynamic world-state evaluation under controlled viewpoint changes with a six-dimensional diagnostic profile.

VLM & VLA Representation Learning

2026 – Present

[1] **VLA-Trace: Diagnosing Vision-Language-Action Models through Representation**

[arXiv 2026](#)

and Behavior Tracing, *Co-author*

Contribution Contributed to connecting representation tracing with rollout behavior to diagnose routing, grounding, and semantic-following failures in VLA models.

[2] **Pelican-Unify 1.0: A Unified Embodied Intelligence Model**, *Co-author*

[arXiv 2026](#)

Contribution Contributed to unified embodied model training and evaluation across understanding, reasoning, future imagination, and action generation.

Medical Vision Foundation Models

2023 – 2026

[1] **Johnson-Lindenstrauss Lemma Guided Network for Efficient 3D Medical Segmentation**, *First Author*

[ICLR 2026](#)

Contribution Proposed VeloxSeg for efficient multimodal 3D medical segmentation under a lightweight parameter budget.

[2] **Does DINOv3 Set a New Medical Vision Standard?**, *Co-first Author*

[arXiv 2025](#)

Contribution Introduced a DINOv3 transfer evaluation across medical modalities and identified where foundation-model scaling remains unreliable.

[3] **H2ASeg: Hierarchical Adaptive Interaction and Weighting Network for Tumor Segmentation in PET/CT Images**, *First Author*

[MICCAI 2024](#)

Contribution Proposed H2ASeg for PET/CT tumor segmentation through hierarchical multimodal interaction and tumor-aware weighting.

[4] **AttriMIL: Revisiting Attention-based Multiple Instance Learning for WSI Classification**, *Co-author*

[Medical Image Analysis 2025](#)

Contribution Contributed to revisiting attention-based multiple-instance learning for interpretable whole-slide image classification.

[5] **IPGPhormer: Interpretable Pathology Graph-Transformer for Survival Analysis**, *Co-author*

[arXiv 2025](#)

Contribution Contributed to interpretable pathology graph modeling for survival analysis and prognosis prediction.

[6] **A Localization-to-Segmentation Framework for Automatic Tumor Segmentation in Whole-Body PET/CT Images**, *Co-author*

[arXiv 2023](#)

Contribution Contributed to a localization-to-segmentation cascade for automatic whole-body PET/CT tumor segmentation.

Additional Project

Generative Sensor Signal Enhancement | *Lead, National Undergraduate Innovation Program*

Jun. 2023 – Jun. 2024

- Reproduced and compared GAN, diffusion, and flow-based models; designed conditional guidance strategies to improve reconstruction quality and perceptual fidelity, producing a reproducible comparison pipeline and experiment report.
